Self-care Book for Women

True "Beauty"
is only achievable through good health,
so let's learn about food,
nutrition and our body.

Eat Well, Live Well.

Women's Body: Changes Throughout a Lifetime

A women's body is strongly influenced by female hormones and continues to change throughout her life. Irregular lifestyles, stress and other factors can cause various physical and mental issues. By understanding the daily fluctuations and generational changes in a woman's body (life stages of the female body) you can better manage these changes.

Good health requires three things:

A well-balanced diet
Moderate exercise
Adequate sleep

Modern women often have irregular eating habits

The Teens

Unstable menstrual cycles and a tendency for extreme eating habits like overeating or excessive dieting.

20s - 40s

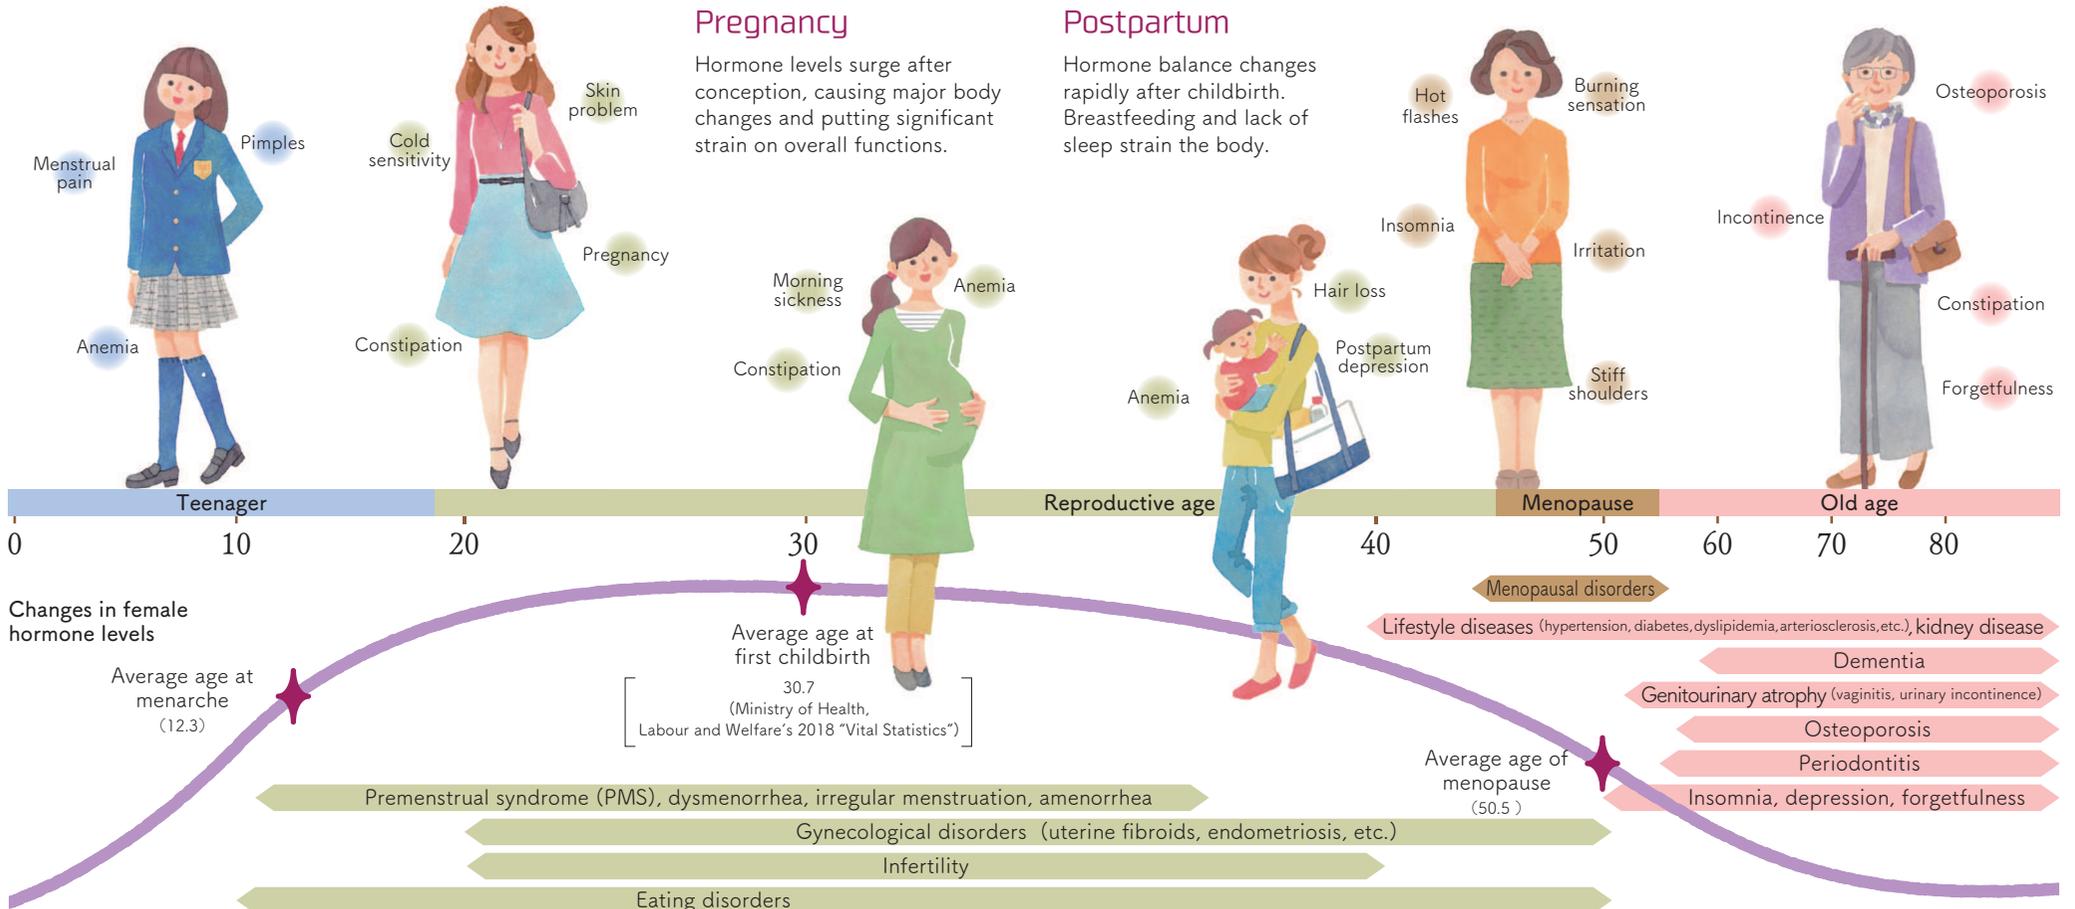

Menstrual cycle stabilizes and the body matures. Increase social roles and busyness can lead to poor eating habits, stress, and a higher risk for women's health issues.

Middle age

From around age 45 to 55, during menopause, female hormone levels drop sharply, increasing the risk of illness.

Senior

As female hormone levels decline, aging progresses. Muscle strength and bone density decrease, increasing the risk of injury and illness.

Start by Learning About Your Own Body

BMI stands for Body Mass Index.

It is a measure that calculates obesity levels based on weight and height.

Both a low and high BMI can have various impacts on your body.

Health is the first step to beauty. Be mindful of your BMI and aim for a healthy weight.

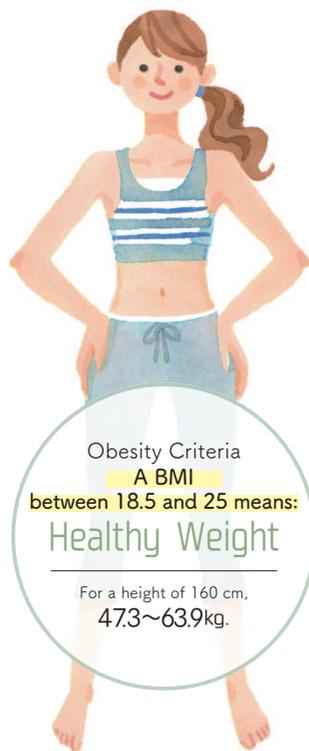

$$\text{BMI} = \frac{\text{Bodyweight (kg)}}{\text{Height (m)} \times \text{Height (m)}}$$

Obesity Criteria
A BMI of
less than 18.5 means:
Underweight

For a height of 160 cm,
this is under
47.3kg.

Risks occur
with malnutrition:

- Muscular weakness
- Increased risk of fractures
- Decreased immunity
- Decline in memory and comprehension
- Reduce vitality etc.

Obesity Criteria
A BMI
between 18.5 and 25 means:
Healthy Weight

For a height of 160 cm,
47.3~63.9kg.

Obesity Criteria
A BMI of
over 25 means:
Overweight

For a height of 160 cm,
this is 64.0kg
and above.

Risks occur
with overweight:

- Increase blood sugar
- Increase blood pressure
- Develop heart disease
- Elevated blood cholesterol etc.

Weigh
yourself
every morning
after going
to the bathroom.

Write your own numbers here and calculate your BMI and healthy weight.

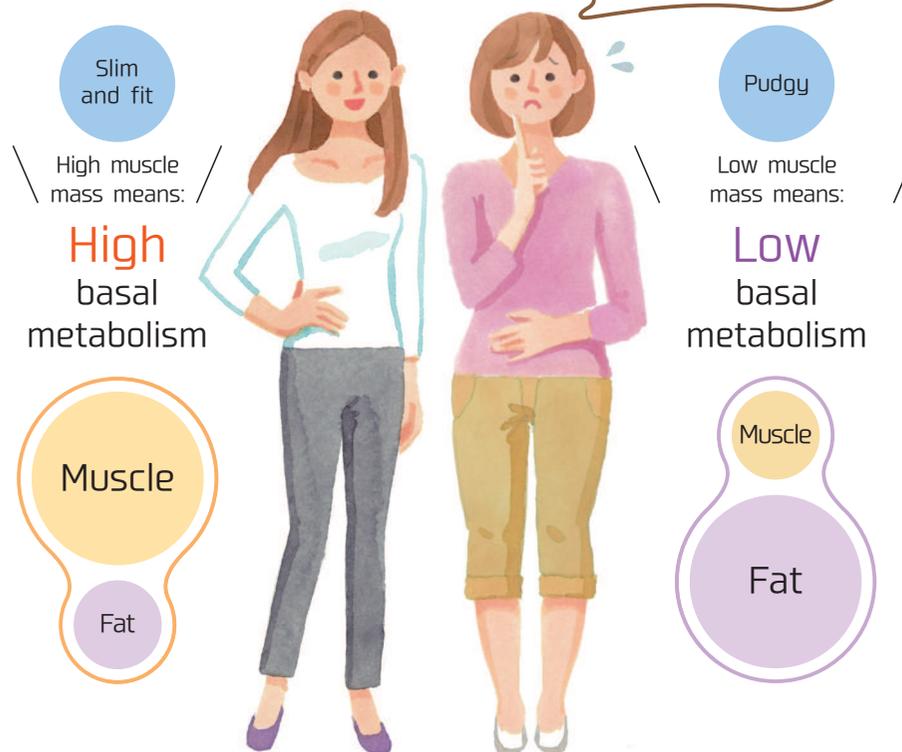

$$\text{Your BMI} = \frac{\text{Weight (kg)}}{\left[\frac{\text{Height (m)}}{\text{m}} \times \frac{\text{Height (m)}}{\text{m}} \right]}$$

$$\text{Your healthy weight (kg)} = 22 \times \left[\frac{\text{Height (m)}}{\text{m}} \times \frac{\text{Height (m)}}{\text{m}} \right]$$

Build Muscle for a High-quality Body

Building muscle increases your basal metabolic rate, which means you can burn more calories with the same amount of physical activity. Losing muscle increases risks of health issues and lifestyle diseases as you get older. To maintain your figure, rather than reducing your food intake, engage in moderate exercise to build muscle and enhance energy expenditure.

We have the same height
and weight...
why so different...?

160 cm height, 56.3 kg bodyweight
BMI=22

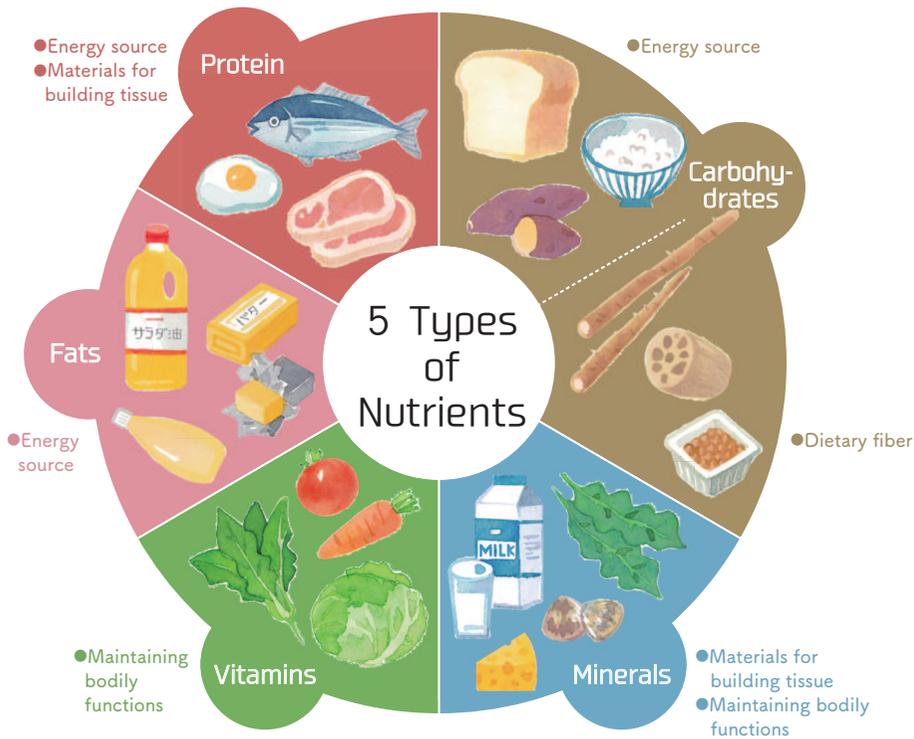

Let's try it out!
Self care

Make a habit of doing little things each day to get more exercise.

- Walk 1,000 extra steps than now
- Don't sit on the train
- Use the stairs instead of the elevator
- Try standing on one leg while doing some housework
- Stretch during work breaks
- Walk to a farther store to shop

Let's take the 5 major nutrients in a balance way

The 5 nutrients have the following functions: (1) providing energy, (2) providing materials for building tissues, and (3) support to regulate bodily functions. Skipping meals or eating too much of specific foods can lead to nutrient imbalance. Strive for a good balance of nutrients in three meals per day.

Let's try it out!
Self care

To get a balanced intake of nutrients, it's important to use a variety of foods. Mark what you ate today with a X and check what you might be lacking.

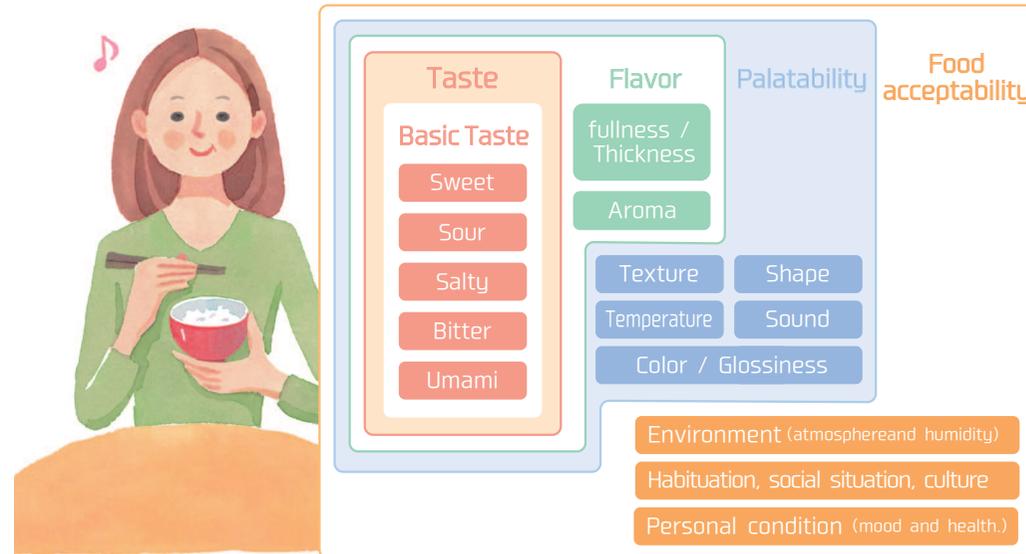

Seafood	Oils	Meat	Dairy products	Vegetables	Seaweed	Tubers	Eggs	Soy	Fruit

Let's Use Umami to Enjoy Delicious Meals Every Day

Many elements affect flavor such as color, temperature, shape, and texture. Umami is one of the 5 basic tastes which is in the Japanese dashi stock. This taste helps to enhance flavor and balance the taste. Using the umami skillful to make every meal delicious and enjoyable is the key to good health.

Delicious food is made up of many elements.

Good Food and the Basic Taste

Let's try it out!
Self care

Boost your meals' flavor with umami-rich ingredients!

- Kelp
- Tomato
